

ULTRAVOICE UV1

Driver-ReadMe

This document gives an overview about the ULTRAVOICE UV1 Windows driver 5.12.0.

Mac OS X Users:

No OS X driver is required for ULTRAVOICE UV1.

Windows Users:

Driver Info:

ULTRAVOICE UV1 requires the installation of a Windows driver before use.

The driver supports Windows 10 operating system.

Previous Windows versions (Windows 7, 8, 8.1) might work but are no longer supported.

Driver Details:

This driver offers...

- full Windows 10 support
- operating with ASIO applications
- operating with WDM/WASAPI applications

Driver Installation:

1. Double-click the setup.exe and follow the on-screen instructions
2. When finished connect your ULTRAVOICE UV1 device via USB

Driver Parts:

The driver setup will install 2 parts:

1. ASIO driver
2. WDM (WASAPI) driver

➤ 1. ASIO:

Generally it is recommended to use the ASIO driver for any music application, if possible. It supports low latency audio operation.

➤ 2. WDM:

Only if no ASIO is available, you should go for the “Windows Driver Model” (WDM, MME, DirectSound, WASAPI). Depending on your system you can expect higher latencies with WDM/WASAPI than with ASIO. Please select the same bit rate and sample rate on both

Windows Sound Device panels (Record/Mic and Playback/Speaker), and on your music application too, to avoid any conflict.

Depending on your system not all bit/sample rate select combinations might be possible.
